Daniel Madi

AI Engineer: AI agents, voice AI, integrations and infrastructure

Lebanon danielmadi96@gmail.com github.com/danielmadii linkedin.com/in/danielmadi danielmadii.github.io

Summary

Engineer building production AI systems: voice and messaging agents with LLM tool use, the integrations that connect them to business software, and the Linux and cloud infrastructure they run on. Co-founder and engineering lead of Hala AI at Meta Empires, and Technical Integration Engineer at Layout Intl. Five years of software and integration engineering, with postgraduate study in cybersecurity at the American University of Beirut.

Experience

AI Engineer & Co-Founder, Meta Empires

Oct 2025 – present, Delaware, USA

- Lead engineering on Hala AI, a real-time voice and text conversational-AI platform across WhatsApp, Instagram and web voice channels, designed for multi-tenant scale.
- Engineered a low-latency voice pipeline in Python and FastAPI with real-time LLM interaction and a dialect-aware speech-to-text and text-to-speech path supporting 20+ languages and native Arabic dialects.
- Implemented LLM function calling that books appointments and reads and writes CRM data mid-conversation across calendar and CRM integrations.
- Architected a multi-tenant TypeScript and Python codebase with workspace-level isolation, encrypted tenant credentials and usage-based billing.

Technical Integration Engineer, Layout Intl

Oct 2023 – present, Lebanon

- Implement production solutions on Linux-based infrastructure, REST APIs and LAMP-stack systems for client platforms and integrations.
- Resolve website, CMS and Linux server incidents within a 30-minute SLA.
- Support AWS-based project implementations and infrastructure operations.
- Onboard and train client teams during deployments, producing documentation and walkthroughs for handover.
- Reduced incident resolution time by 20%.
- Hardened servers with SSH policy controls, MFA enforcement, role-based access controls, security scripting and log rotation.
- Implemented and validated disaster-recovery procedures: database backups, VM snapshots, restore testing, and API validation workflows in Postman and cURL.

Software Engineer, SpaceTech

Oct 2021 – Sep 2023, Lebanon

- Developed and maintained web platforms and CMS-based systems with a focus on performance, scalability and production reliability.
- Built responsive websites and backend-driven systems in Laravel and WordPress.
- Improved performance and SEO, reducing page load time by 20%.

Selected projects

Hala AI

Company product, Oct 2025 – present

A multi-tenant conversational-AI platform whose voice and text agents answer calls and chats, qualify leads and book appointments across phone, WhatsApp, Instagram, Facebook and web chat. tryhala.ai

PetFindr

Open-source project, Jun 2023 – May 2024

A web app for reporting found pets and searching for lost ones on an interactive map, with an Express API, MySQL storage and server-side captcha verification.

StaxAI

Product

A unified interface that brings several AI models, including ChatGPT and Claude, into one workspace. staxsai.com

Education

Postgraduate Diploma in Cybersecurity (in progress)

2025 – 2026

American University of Beirut. Network and systems security, ethical hacking, threat analysis and defensive operations.

Bachelor's in Computer Science for Business Applications

2020 – 2023

Lebanese University

Technical expertise

AI and LLM engineering	LLM APIs, AI agents, Function calling, Prompt engineering, Context engineering, AI workflow architecture, Claude Code
Voice AI and real-time communications	Twilio, ElevenLabs, Fish Audio, Pipecat, WebRTC, TURN servers, Speech-to-text and text-to-speech pipelines, Real-time voice processing
Automation and integrations	n8n, Make, Zapier, GoHighLevel, Slack API and webhooks, REST APIs, Webhooks, Third-party integrations, Postman, cURL
Backend and databases	Python, FastAPI, Node.js, Express, PHP, Laravel, SQL, MySQL, PostgreSQL, PlanetScale, API development, Database architecture
Development	JavaScript, TypeScript, React, WordPress, Full-stack development, Git, GitHub
Infrastructure and deployment	Linux server administration, SSH, AWS, Docker, CI/CD, Vercel, Railway, Cloud infrastructure, LAMP stack, Log management, Backups and disaster recovery, Production troubleshooting
Cybersecurity	Server hardening, SSH policy controls, MFA enforcement, Role-based access control, Security scripting, Log analysis, Disaster-recovery testing, Encrypted credential storage, Vulnerability research and responsible disclosure, Kali Linux, Network and systems security, Ethical hacking, Threat analysis, Defensive operations

Certifications and training

- Certified in Cybersecurity (CC), ISC2 (certification, May 2026)
- Fortinet Certified Associate in Cybersecurity, Fortinet (certification, May 2026)
- Fortinet Certified Fundamentals in Cybersecurity, Fortinet (certification, Apr 2026)
- Google Cybersecurity Professional Certificate, Google (course certificate, Sep 2023)
- Claude Certified Architect – Foundations (CCA-F), Anthropic (in progress)
- Linux administration training for RHCSA, RHCE, LFCS, LPIC and CompTIA Linux+ (training)
- SEO AI automation training (training)

Languages

Arabic (native), English (full professional proficiency), French (intermediate)
